

Power BI Map Visualizations

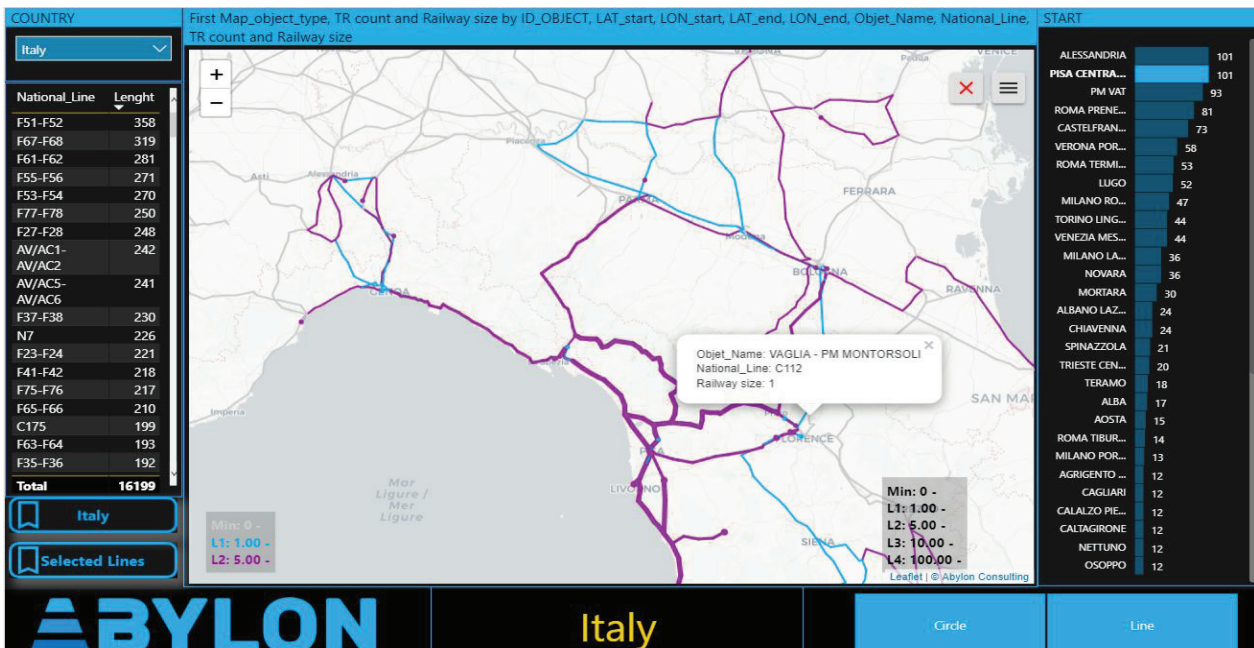

Advanced map visualization tools for some of the most complex infrastructure providers. Our Power BI custom map solution gives analysts an easy tool-set with domain specific visualizations to make data speak in the context of our customer's line-based physical infrastructure.

Advanced Maps

BRIEF OVERVIEW

Using its flexible customization options, Abylon MAP can be used to visualize business critical data for various business cases within a number of sectors, including transportation, energy, utility, telco or any industry that uses fixed, line-based infrastructures.

Custom railway map of Italy in Power BI

BENEFITS OF ABYLON MAP

01

DOMAIN SPECIFIC VISUALIZATIONS AND DATA MODELS

02

ACTIVE MAPS BASED ON POWER BI MODELS OR GEOJSON URL

03

DISCOVER HIDDEN PATTERNS AND WHAT IF ANALYTICS

04

GIVE DATA MEANINGFULL CONTEXT FOR EFFECTIVE ANALYTICS

Get more out of Power BI

ADVANCED, CUSTOM POWER BI MAPS

Our highly customizable solution extends the limited functionality of Microsoft Power BI's own native map visualization solution, with domain specific functionality, option for self-service analytics, flexible rule sets, modular infrastructure and many-many more.

If you need point-to-point routing, line logic selections, or advanced map visualization like detailed routes and objects, or navigation between areas and complex area hierarchies you need Abylon MAP!

If you are already using Power BI data warehouses you can easily integrate our map visualization solution for your existing or future tabular models.

MAIN FEATURES

IDEAL FOR LINE-BASED NETWORKS

Visualization of linebased infrastructure using coordinates in the data model or external GeoJson layer descriptions.

VISUALIZATION OF LOCATIONS

Visualization of locations (e.g.: railways stations) on top of the line-based infrastructure

SELECTION ENGINE AND CROSS FILTERING

Selection engine for interactivity and cross filtering inside a Power BI report (selecting multiple parts of different lines, stations)

USE COLORS AND WIDTH FOR BETTER CONTEXT

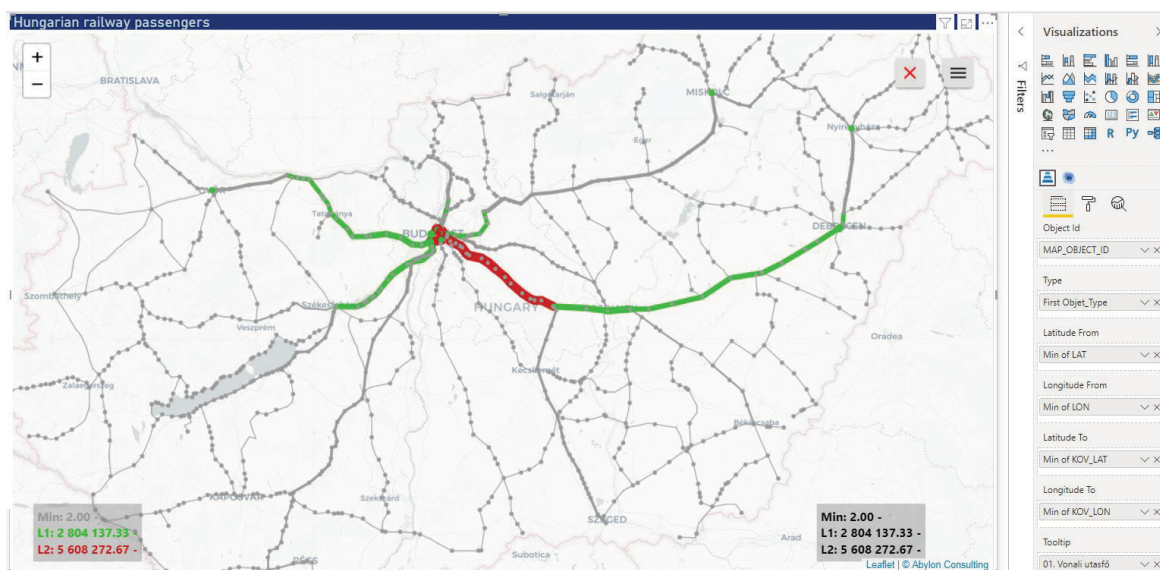

Flexible rules for colors / widths – from easy-to-use automatic rules to fully customizable DAX based calculations

What's under the hood

DETAILED FEATURES

- **USE CIRCLES AND LINES FOR OBJECT TYPES**
Use multiple object types (circles and lines) simultaneously. Select circles or lines, drill-down from areas, divide lines by direction, use geojson files for lines, points, areas and much-much more.
- **MULTIPLE POINT AND ROUTE SELECTION, MULTIPLE LAYERS**
Select multiple routes at the same time or search for and zoom geographical locations all inside Abylon MAP. Use multiple layers simultaneously, for example: Layer 1-2 – regions with two aggregated KPI's, Layer 3 – line or circle based map.
- **EASY-TO-USE PARAMETERS FOR DIFFERENT COLORS AND WIDTHS**
Coloring, line-weighting and circle sizing by measures, all at same time. Multiple types of calculation methods of weight and colors: linear calculation, manual or color scale.
- **COMPLETE CROSS FILTERING INSIDE POWER BI**
Power BI filters the visualization inside Abylon Map layers. Search for and zoom geographical locations.
- **NO DEVELOPER SKILLSET REQUIRED**
Abylon MAP is an efficient tool for self-service analytics. No developer skill set is required. This, combined with the rapid implementation, allows for a super quick go-live.

For line-based infrastructures

IDEAL USE CASES FOR ABYLON MAP

To put it simple Abylon MAP is must-have in any business dealing with fixed, line-based infrastructures. This includes the Transportation industry (Railways, Public transportation, Airlines, Shipping), the Energy industry and Utilities providers (Pipes networks, Electricity networks), Telecommunication providers (Internet and Telecommunications networks).
